

Fall Protection Equipment

Inspect your fall protection equipment before EVERY use:

- Inspect harness for cuts, rips, torn, modified, burned, or damaged in any way
- Inspect lanyard/lifeline for knots, cuts, rips, dents, or otherwise damaged
- Inspect hardware for cracks, dents, bends, or defects
- **DON'T USE A DEFECTIVE HARNESS OR LANYARD – REMOVE FROM SERVICE!**

Fall protection equipment only works if you use it:

- Make sure you are **ALWAYS** tied off properly when working in heights
- **ALWAYS** tie off during transition between vehicles and manlifts
